

# 10.2.D1 • Parallelograms

Which property (or definition) can you use to prove that the quadrilateral is a parallelogram based on the given information?

1.  $\overline{FG} \parallel \overline{IH}, \overline{FI} \parallel \overline{GH}$

2.

3.

4.

5.  $\overline{AE} \cong \overline{EC}, \overline{BE} \cong \overline{ED}$

6.

7.

8.

9.

10.

11.

12.

**PROOFS MUST BE DONE ON PROOF PAPER**

Use the definition of parallelogram, as well as those properties we proved in class.

13. Given:  $\overline{AB} \cong \overline{CD}$   
 $\overline{BE} \cong \overline{FD}$   
 $\overline{EC} \cong \overline{AF}$   
 Prove:  $ABCD$  is a  $\square$

14. Given:  $\overline{AB} \parallel \overline{CD}$   
 $\angle 1 \cong \angle 2$   
 Prove:  $ABCD$  is a  $\square$

15. Given:  $\angle O \cong \angle M$   
 $\angle QPR \cong \angle ONM$   
 Prove:  $MNOP$  is a  $\square$

16. Given:  $\overline{MA} \cong \overline{HT}$   
 $\angle AMT \cong \angle HTM$   
 Prove:  $MATH$  is a  $\square$

17. Prove the property: *The diagonals of a parallelogram bisect each other*  
 Hint: This proof requires congruent triangles.

- Given:  $ABCD$  is a  $\square$   
 Prove:  $\overline{AC}$  &  $\overline{BD}$  bisect each other
