

**1.5.D1 – Parallel & Perpendicular Lines on the Coordinate Plane**

Use the slope formula to find the slopes of  $\overleftrightarrow{AC}$  &  $\overleftrightarrow{BD}$ . Are the lines parallel, perpendicular, or neither?

3. Write the equation of three different lines – in slope-intercept form – that are parallel to the line  $x - 2y = 12$ .

4. Write the equation of three different lines – in slope-intercept form – that are perpendicular to the line  $3x + 2y = -6$ .

Write an equation in point-slope and slope-intercept form for the line that is parallel to the given line and that passes through the given point.

5.  $y = -3x + 4$ ; (6, -2)

6.  $y = 4x + 5$ ; (4, -3)

7.  $y = \frac{1}{2}x + 5$ ; (4, -3)

8.  $y = -\frac{4}{3}x - 2$ ; (3, -5)

*Write an equation in point-slope and slope-intercept form for the line that is perpendicular to the given line and that passes through the given point.*

9.  $y = -3x + 4$ ;  $(6, -2)$

10.  $y = 4x + 5$ ;  $(4, -3)$

11.  $y = -\frac{2}{3}x - 7$ ;  $(4, 5)$

12.  $y = \frac{1}{2}x - 2$ ;  $(3, -5)$
